

The Inverse of a Square Matrix

Section 8.3

Identity Matrix

The $n \times n$ matrix with 1's on its main diagonal and 0's elsewhere is called the identity matrix of order $n \times n$.

$$I_n = \begin{bmatrix} 1 & 0 & 0 & \dots & 0 \\ 0 & 1 & 0 & \dots & 0 \\ 0 & 0 & 1 & \dots & 0 \\ \vdots & \vdots & \vdots & & \vdots \\ 0 & 0 & 0 & \dots & 1 \end{bmatrix}$$

Inverse of a Square Matrix

Let A be an $n \times n$ matrix and let I_n be the $n \times n$ identity matrix. If there exists a matrix A^{-1} such that

$$AA^{-1} = I_n = A^{-1}A$$

then A^{-1} is called the **inverse** of A . the symbol A^{-1} is read “**A inverse**”.

Show that B is the inverse of A where

$$A = \begin{bmatrix} 4 & 5 \\ 3 & 4 \end{bmatrix}$$

$$\text{and } B = \begin{bmatrix} 4 & -5 \\ -3 & 4 \end{bmatrix}$$

Find the Inverse of a Matrix

Find the inverse of $A = \begin{bmatrix} 1 & -2 \\ -1 & 3 \end{bmatrix}$.

$$I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} 1(3) + (-2)(-1) & 1(2) + (-2)(1) \\ -1(3) + 1(3) & -1(2) + 3(1) \end{bmatrix}$$

1. Let A be a square matrix of order $n \times n$.
2. Write the matrix with the identity matrix on the right to get $[A : I]$.
3. If possible, row reduce A to I using elementary row operations to get $[I : A^{-1}]$.
4. Check your work by multiplying $AA^{-1} = I = A^{-1}A$.

$$\begin{bmatrix} 1 & 1 & 1 \\ 3 & 5 & 4 \\ 0 & -1 & 0 \end{bmatrix}$$

$$\begin{bmatrix} 4 & -1 & -1 \\ 0 & 0 & -1 \\ -3 & 1 & 2 \end{bmatrix}$$

$$\begin{bmatrix} & & \\ & & \\ & & \end{bmatrix}$$

The Inverse of a 2 x 2 Matrix

A formula that works only for 2 x 2 matrices is given by

$A = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$ if $ad - bc \neq 0$. The inverse is given by

$A^{-1} = \frac{1}{ad-bc} \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}$. The denominator $ad - bc$ is called the **determinant** of the matrix.

If possible, find the inverse of $A = \begin{bmatrix} 5 & -1 \\ 3 & 4 \end{bmatrix}$

Graphing Calculator to the Rescue!

You invest \$15,000 in AAA-rated bonds, AA-rated bonds and B-rated bonds, and want an annual return of \$1140. The average yields are 3.5% on the AAA bonds, 5% on the AA bonds and 6% on the B bonds. You invest twice as much on the AAA bonds as in the AA bonds.

$$\begin{cases} x + y + z = 15000 \\ .035x + .05y + .06z = 720 \\ x - 2y = 0 \end{cases}$$

How much have you invested in each? Use an inverse matrix to solve.
